I. Introduction

1 Overview

NTC NGFF SSD (Solid State Drive) is a high performance and high reliability storage device based on NAND Flash technology that designed to solve the bottleneck of computing system by traditional hard disk drives. NGFF SSD can be plugged into a standard NGFF connector commonly found in desktops, IT-STB, industrial PCs and thin client systems, compatible with Windows, MAC, Linux and else OS. With a high performance and low power consumption, Our NGFF SSD can be a good storage device for NB and Tabletop PC.

NTC SSD purely consists of semiconductor devices and NAND flash memories, without any moving parts. It gives rugged features against shock and vibration, used in extreme environment such as industrial PC to increase MTBF. Furthermore, Our SSD has highly advanced flash memory management algorithm to guarantee higher performance and data integrity.

2 Part Type Introduction

This chapter is about the specifications of the NGFF SSD with NGFF interface, it is compatible with SATAIII protocol.

II. Outline

Based spec	Interface	NGFF
	Dimension	22*80*3.73 mm
	Weight ^①	<40g
	Capacity	128GB
	Flash type	TLC NAND Flash
Read/Write Performance ^②	Sequential Read	Up to 530MB/s
	Sequential Write	Up to 450MB/s
	4KB Random Read IOPS	25500
	4KB Random Write IOPS	62887
	Response Time	0.2ms
Power Consumption	Power Supply	3.3V±5%
	Standby	0.3W
	4KB Random Write	2W
Reliability	Write endurance: 8 years @ 100G write/day(120G)	
	Read endurance: unlimited	
	MTBF: >2,000,000 hours	
	Data retention: >20years @ 25°C	
	Data destroy do not support	
	Sudden power-off recovery support	
	S.M.A.R.T,NCQ,Trim and dynamic power management support	
	Static and dynamic wear-leveling	
	Bad block management algorithm	
	ECC: LDPC ECC	
Environment	Storage temperature: -40~85 °C	
	Operation temperature: Optional	
	Humidity: 5%~95%	
	Vibration: 20G Peak, 10 ~ 2000Hz, (15mins/ Axis) x3 Axis	
	Shock: 1500G (@0.5ms half sine wave)	
Warranty	2 years

4.2.2 Interface Mode

The interface of the NGFF complies with the SATAIII protocol:

- ① NGFF
- ② PIO mode 0,1,2,3,4
- ③ DMA mode 0,1,2
- ④ UDMA mode 0,1,2,3,4,5,6

V Reliability Specification

5.3.1 ECC Descriptions

LDPC ECC

The LDPC ECC engine executes parity generation and error detection/correction features, and enhances decoding throughput and data reliability. With LDPC of correction capability $1e-2$ RBER, the hard and soft decoding mechanism provides powerful error correction. Hence the SM2256 can enhance the endurance and retention of TLC NAND and extends the SSD lifespan.

5.3.2 Advance Wear-Leveling Algorithm

The NAND flash devices are limited by a certain number of write cycles. When using a file system, frequent file table updates is mandatory. If some area on the flash wears out faster than others, it would significantly reduce the lifetime of the whole device, even if the erase counts of others are far from the write cycle limit. Thus, if the write cycles can be distributed evenly across the media, the lifetime of the media can be prolonged significantly. The scheme is achieved both via buffer management and specific advanced wear leveling to ensure that the lifetime of the flash media can be increased, and the disk access performance is optimized as well.

5.3.3 S.M.A.R.T Function

S.M.A.R.T. is an acronym for Self-Monitoring, Analysis and Reporting Technology, an open standard allowing disk drives to automatically monitor their own health and report potential problems. It protects the user from unscheduled downtime by monitoring and storing critical drive performance and calibration parameters. Ideally, this should allow taking proactive actions to prevent impending drive failure. SMART feature adopts the standard SMART command B0h to read data from the drive. When the SMART Utility running on the host, it analyzes and reports the disk status to the host before the device is in critical condition.

VI. Command Descriptions

6.1 ATA Command Register

This table with the following paragraphs summarizes the ATA command set.

Command name	Code(Hex)	Command name	Code(Hex)
CHECK POWER MODE	E5h	SECURITY ERASE UNIT	F4h
